

# Quick Guide Ambu® Manikin Management Module

## Change the menu language

In the delivery condition of the training device, the standard menu language is set as English.

In the following sections you will find out how to change the language.

### 1. Connect the end device with the training device

First turn on the training device by briefly pressing the power button located in the lower torso. As soon as the LED lights of the power button is constantly lit, you can connect to the training device via WiFi.

To do so, select the wireless network „AmbuW“.

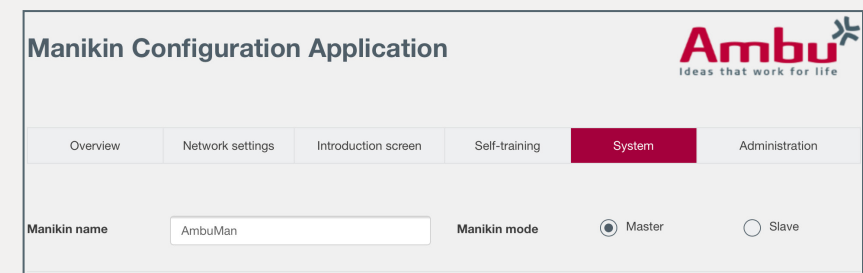

Open the browser and enter **http://Ambu.login** or **192.168.1.1** in the address bar and press enter in order to reach the start screen of the Ambu Manikin Management Module.

### 2. Open the general configuration

In order to access the configuration, enter **http://Ambu.login/config** or **192.168.1.1** into the address bar of the browser and confirm.

### 3. Change the menu language from English

After accessing the page, you will be in the „Overview“ menu item. In order to access the language settings, click on the „System“ tab.

## Continuation: Change the menu language from English

**Battery saving**  Enable  Disable

**Demo mode**  Enable  Disable

**Language** English ▲

- Cesky
- Dansk
- Deutsch
- Ελληνικά
- Español
- English

Save

If you click on the „Language“ from the selection list, you can select the desired language.

Finally, click on the „Save“  button.

## 4. Accept the new settings

**Manikin Configuration Application** 

Overview Network settings Introduction screen Self-training **System** Administration

The system configuration has been successfully saved. You must restart the manikin to activate all changes.

**Manikin name** AmbuMan **Manikin mode**  Master  Slave

Once the language settings have been saved, the training device must be restarted so that the settings can be correctly imported.
